

Task:

Create an array of 5-element unemployed objects with the following characteristics:

- Name,
- last name,
- gender (string of characters),
- year of birth (whole number)
- years of service (real number).

Create a function:

- to enter the characteristics of one object and use it to enter the characteristics of all elements string
- printing the characteristics of an object;
- to count all the unemployed who have more years of service than the value entered by the user;
